

Kelva Adhesive Rolls

Improved Quality

– Kelva's adhesive rolls help you reducing contamination up to 98%!

- Very high adhesive coat weight
- Sheeted, pre-cut rolls available from stock
- Moisture resistant paper
- Very high wind quality on high impact polystyrene core
- Can also be produced to fit non - Kelva cleaners

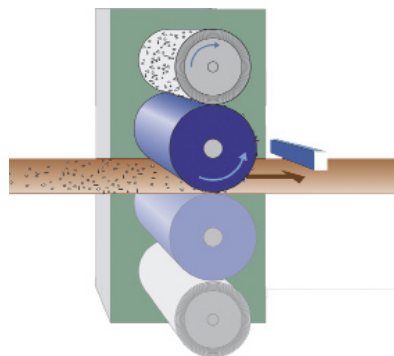

PRODUCT DESCRIPTION

Product name	Kelva Adhesive Rolls
Application	In every industry where a contact web cleaner can be used
Paper, sheeted or continuous	Moisture resistant to ensure quality during transit, storage and use. Tested for thickness consistency and profile to ensure constant wind tension. Standard 76mm (3") id core - 22,4m long rolls, 70 sheets 150mm (6") id core - 40m long rolls Standard and non standard widths available from 100mm to 1500mm
Core material	High impact polystyrene
Adhesive coating	High coat weight of rheology modified adhesive to secure high contaminant collection and encapsulation of the particles.
Traceability	Each individual roll carries a batch reference code for total traceability back to raw material and processing data
Packaging	Individually film wrapped, packed in custom sized protective tubes and sealed with end bungs

KELVA CONTACT CLEANER PRINCIPLE

The polymer roller touches the web and collects dust, which will be transmitted to the adhesive roll when they get in contact with each other.
