

Clean Paper Production

How Much Simpler Life
Would be if You Could Just...

- improve on customer satisfaction and lessen product rejects
- reduce emission, use of unhealthy cleaning products and machine downtime
- prevent damage and extend life of your costly rollers
- always be able to deliver best quality, regardless changing conditions
in materials from your suppliers
- increase production without extra labour costs

Simplify Life - With the Right Web Cleaning Solution

Kelva provides Web Cleaning Solutions for various materials and industries. However, our starting point from the beginning has been to design web cleaning tools for the paper & converting industry. That's where our Non Contact Web Cleaners began their evolution.

By Non Contact, Kelva really means: no contact at all. Not the slide plate "semi-contact" web cleaner that will hideously damage the surface of your product. Kelva's highly effective Cleanflow® with guaranteed non-contact cleaning principle protects your production against contact damage.

Kelva's Cleanflow® leaves your web untouched while cleaning it thoroughly. We provide standard as well as custom made solutions. Our in-line web cleaning systems come with demonstrable results and guaranteed performance.

In-line installation

Using the peripherals of your line is a challenge our engineers are happy to deal with.

6.000 mm

Web cleaner integrated in a web guide, a solution without jeopardizing daily sequences.

Total integration

Without limits. Our skilled engineers present a dust extraction system that fits.

Kelva – for a clear eye on quality...

Kelva Non Contact Cleanflow® HS85

A proven concept from a tissue line of 550 mm up to a 11.000 mm winder of production machine.

Knife dust extraction

The slitters generate about 60% of the total contamination sent to your customers. A total concept from Kelva combines knife dust extraction with web cleaning which will show an enormous contribution to the quality of your product.

Cleanflow®

Made to measure - we even leave your infeed system in function.

Special demands need special solutions

The Kelva Cleanflow® is a made to measure solution, ensuring excellent integration in your processes.

If Dust Complicates Your Life, Kelva Provides the Proper Solution!

Benefits of the Kelva Non Contact Web Cleaning System

- contamination-free products
- quality increase, meaning customer satisfaction
- reduction of emission and improvement of working conditions
- extension of roller life (calenders)
- less damage caused by coating debris and production remains
- compensation of fluctuating quality in supplied substrates
- reduction of machine down-time due to less cleaning and maintenance
- reliable and continuous surface cleaning without declining performance due to "consumables"
- in-line web cleaning solution with demonstrable results and performance
- reduction of labour costs
